Drive Clean Rebate for Electric Cars

Thinking about making the switch to an electric vehicle? There's never been a better time. EVs offer a cleaner, more advanced driving experience while helping drivers save on fuel and maintenance costs. Plus, with New York's growing charging network and generous incentives, owning an EV is becoming easier than ever.

Through New York State's Drive Clean Rebate program, eligible buyers and lessees can receive up to \$2,000 off more than 60 electric vehicle models at participating dealerships. The rebate is applied directly at the point of sale, providing immediate savings.

Current rebate amounts include:

- Up to \$2,000 for EVs with more than 200 miles of electric range
 - \$1,000 for EVs with 40–199 miles of electric range
 - \$500 for EVs with less than 40 miles of electric range
 - \$500 for eligible models with an MSRP above \$42,000

Whether you're a resident, business, or government entity, these incentives can make switching to an electric vehicle more affordable than ever.

Drive Electric Long Island In the Community

Family and Friends Community Day

On May 5th, Drive Electric Long Island joined the fun at the “Family and Friends Community Day” presented by the John J. Byrne Community Center in Uniondale. It was an amazing opportunity to connect with children who may one day become future EV drivers, along with their families and community members.

The energy all day long was incredible as kids lined up to spin our EV “Wheel of Knowledge,” answer EV trivia questions, and win prizes. The mini electric car keychains and EV bouncy balls were definitely crowd favorites. Most importantly, everyone who participated walked away a winner while learning more about electric vehicles and sustainability in a fun, interactive way.

HIA-LI 38th Business Trade Show & Conference

We had a great time at the HIA-LI 38th Annual Business Trade Show & Conference, connecting with local businesses, professionals, and community members throughout the day.

Thank you to everyone who stopped by to learn more about the benefits of driving electric. From lower fuel and maintenance costs to the convenience of charging at home and a quieter, smoother driving experience, more drivers are discovering how practical EV ownership can be.

Ribbon Cutting at Glen Cove New EV Charging Station

We were honored to join Mayor Pamela Panzenbeck and city officials for the ribbon cutting of the new EV charging stations at the Brewster Street Parking Garage.

Funded in part through New York State's Zero Emission Vehicle (ZEV) Grant Program, these new chargers help expand access to clean transportation while supporting Glen Cove's sustainability goals.

Following the ceremony, we hosted an EV 101 presentation at the Glen Cove Public Library, where residents learned about electric vehicles, charging options, incentives, and what it's really like to drive electric.

Optiwatt EV Smart Flex Charging Pilot

Optiwatt and PSEG Long Island are offering a residential managed charging pilot called the EV Smart Flex Charging program, administered in partnership with the smart-charging app Optiwatt. The pilot is capped at 500 vehicles and runs through October 31, 2026, to help balance the local electric grid and prevent equipment overloading.

Participants receive a \$40 enrollment reward after confirmation and an additional \$40 reward at the end of the program (if enrolled for the duration).

Details about the program can be found [HERE](#).

Get up to \$400 off a Residential Charger from PSEG LI

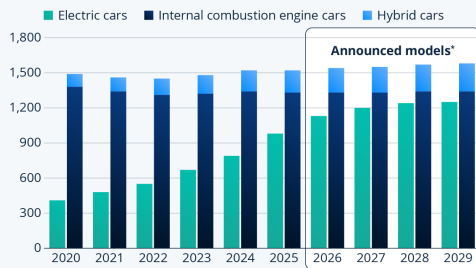

Qualified PSEG Long Island customers can receive a \$100 rebate off a qualified Level 2 EV charger. Customers located in Disadvantaged Communities (DAC) and on our Household Assistance Program can receive an additional \$300 – totaling \$400 in rebates. An interactive map of designated Disadvantaged Communities can be found [here](#).

statista

EVs Are Now Available in Nearly as Many Models as Gas Cars

The number of electric car models is expanding rapidly and is expected to soon challenge the range of conventional combustion-engine cars available worldwide. Data from the International Energy Agency shows how car manufacturers have accelerated EV development over the past decade, with the number of EV models available globally more than doubling from 410 in 2020 to 980 in 2026.

Used EVs Under \$25,000 Are Changing Who EVs Are For

Used EVs at this price point tend to work best for drivers with consistent daily mileage and reliable access to home charging. A garage, driveway, or dedicated parking space simplifies the experience considerably.

They can also make sense for two-vehicle households, where one car handles longer road trips and the EV manages everyday driving.
