[Curious How Many EVs Are In Your Neighborhood?](#)

Thousands of Long Islanders are already driving electric—and the numbers keep climbing. Explore how EV ownership is spreading across neighborhoods and towns. As more residents make the switch, we're building momentum toward a cleaner, more affordable transportation future for everyone.

Check out how many EVs are on the road in your community [HERE!](#)

EV 101

WESTBURY MEMORIAL PUBLIC LIBRARY

**WEDNESDAY,
MAY 20TH
10 AM -
11:30 AM**

**Learn the basics about electric vehicles and charging,
and get the chance to speak with current EV owners
about why they went electric and what it's really like to
drive one.**

445 JEFFERSON STREET, WESTBURY, NY 11590

Join Drive Electric Long Island to learn the history of electric vehicles (EVs), EV basics, EV charging basics, take a look at today's most popular EVs on Long Island, understand cost savings and available incentives, common myths and misperceptions, and resources available to continue learning. Plus, connect with current EV owners to find out what it's really like to own and drive one. Several electric cars will be available on site if you'd like to take a look.

[Drive Electric Long Island In the Community](#)

Patchogue EV & Sustainability Fair

On April 11th, we celebrated Earth Month at the Patchogue EV & Sustainability Fair.

Thank you to everyone who came out to explore the latest electric vehicles, connect with sustainability vendors, and celebrate clean energy with the community. From the solar carport ribbon cutting to the family-friendly activities, it was an inspiring day filled with education, innovation, and community connection. We loved seeing so many people excited about the future of sustainable transportation and energy on Long Island.

2026 EV Symposium & Ride & Drive at Farmingdale State College

On April 24th, we hosted the 2026 EV Symposium & Ride & Drive at Farmingdale State College.

The event brought together local organizations, municipalities, EV dealers, manufacturers, and residents for a day of education, innovation, and hands-on EV experiences. Attendees explored incentives, charging strategies, fleet adoption insights, and test drove a variety of electric vehicles from multiple dealers.

Thank you to everyone who joined us and helped make this year's event a success.

Richner Senior Health Expo in Seaford, NY

The seniors came out in force to learn about EV basics at the Richner Senior Health Expo on May 1st.

We explored how exciting it can be to embrace new technology while also dispelling common misconceptions and easing concerns. As gas prices continue to rise, so does interest in making the switch to EVs and plug-in hybrid vehicles.

And to top it all off, the “Seasoned Senior” dancers brought the energy and made it a fun, engaging experience for everyone in attendance!

Babylon Earth Day

On Saturday, May 2nd, Drive Electric Long Island joined the fun-filled Town of Babylon Earth Day celebration.

This family-friendly event brought out EV-curious attendees of all ages, who stopped by to test their knowledge on our prize wheel. It was especially inspiring to connect with so many children who were excited about becoming future EV owners.

With a 2026 Toyota BZ and Chevy Bolt EV on site, families had the opportunity to explore how owning and driving an EV can fit seamlessly into their Long Island lifestyle.

**Get up to \$400 off a Residential Charger
from PSEG LI**

Qualified PSEG Long Island customers can receive a \$100 rebate off a qualified Level 2 EV charger. Customers located in Disadvantaged Communities (DAC) and on our Household Assistance Program can receive an additional \$300 – totaling \$400 in rebates. An interactive map of designated Disadvantaged Communities can be found [here](#).

Click [HERE](#) for information on how to apply.

EV News

Used EVs Under \$25,000 Are Changing Who EVs Are For

Used EVs under \$25,000 are pushing electric driving into normal used-car shopping. When range covers daily life and home charging is available, the decision shifts from “Should I try an EV?” to “Does this beat the gas car next to it?”

[Read More](#)

Electric vehicles use half the energy of gas-powered vehicles

The reality: EVs require much less energy to operate than gasoline-burning vehicles. In fact, with the nation’s current electricity blend, an EV requires only about half the energy needed for a gasoline-powered internal combustion engine.
